Japan 2035
Leading the World through Health
Yasuhisa Shiozaki, Minister of Health, Labour and Welfare
“Health Care 2035” Advisory Panel members

- Average age of 42.7. Diverse expertise and background. 4 members from the Ministry. Secretariat from both public and private sectors
- “Heavy weights” supported as advisors
- Briefing to Prime Minister on a regular basis
A health care system built for the next 20 years and designed for all lifestyles and people – from children to older people, from patients to providers – where individuals feel secure and supported to make the life and work choices that are right for them.

Amidst rapid population ageing, advances in medical technology, and major shifts in health care, a health care system that contributes to financial stability while engaging each sector of society to support a nation of health and well-being, where each person is empowered to realize their full wellness potential.
Issues and challenges

To ensure sustainability and equip the health care system to meet current and future health care needs, we need to:

• Break away from the patchwork style of health policy making and embrace comprehensive reform building upon a forward-looking and long-term vision.

• Transform health care into a social system that engages all sectors through shared vision and values, in contrast to maintaining the current system through basic cost increases and benefit cuts.
Social systems:
Creating and providing values for customers

Implications from *Health Care 2035*

**Financial Big Bang (1996)**
1. Free
2. Fair
3. Global

**Health Care 2035 (2015)**
1. Value-based service
2. From cure to care
3. Global
Key questions

1. What existing policies should be strengthened?
2. What key issues have been repeatedly sidelined due to politics?
3. What should be discussed now to kick start future public debates?
4. How can Japan best contribute to other countries through health? What can Japan learn from the health care experiences of other countries?
Paradigm shift

Existing model

- Quantity
- Inputs
- Regulation
- Cure
- Fragmentation

Toward 2035

- Quality
- Value
- Autonomy
- Care
- Integration
Overview of Health Care 2035

GOAL
Health care in 2035 should strive to deliver unmatched health outcomes through care that is secure and responsive to each member of society. This system should not only fit the public’s image of what a health system should be, but be both sustainable and actively contribute to prosperity in Japan and around the world.

PRINCIPLES
- Fairness
- Solidarity built on autonomy
- Shared prosperity for Japan and the world

VISION
Key concepts for health care in 2035

1. LEAN HEALTHCARE
Implement value-based health care

2. LIFE DESIGN
Empower society and support personal choice

3. GLOBAL HEALTH LEADER
Lead and contribute to global health

INFRASTRUCTURE
Foundations of this vision

- Innovation
- Information
- Sustainable financing
- Health care professionals
- A world-class Ministry of Health, Labour and Welfare
## Implications from *Health Care 2035* (examples)

Japan’s vision for a peaceful and healthier world

Health is fundamentally a global issue. Recent outbreaks of Ebola virus disease and Middle East respiratory syndrome have reminded us that global health issues require collective action. The world must unite and countries must establish resilient and sustainable health systems, ensuring that each individual is secure and receives the highest attainable standard of health. Japan has been a longstanding advocate of human security* and has taken concrete action on the ground in support of this principle. Human security protects the vital core of all human lives in a way that enhances freedom, fulfilment, and capabilities* and underlies Japan’s policy of Proactive Contribution to Peace. Japan regards health as an indispensable element of human security.*

In September 2015, the United Nations General Assembly adopted the 2030 agenda for sustainable development, which includes universal health coverage (UHC), to which Japan attached great importance during the negotiation process.* Achieving UHC requires comprehensive changes to systems, human resources, and public awareness. To catalyse such changes, leaders must commit to leave no one behind in the drive for the best attainable health gains. The Sustainable Development Goals (SDGs) have created an opportunity to connect sectors and empower individuals, families, and communities. It is crucial that we agree on a monitoring and evaluation framework so that the impact of UHC against investment is measurable and thus attainable.

Japan will host the first G7 Summit after the adoption of the SDGs in May 2016. Alongside the G7 Health Minister’s Meeting, and the Tokyo International Conference on African Development, Japan will create an opportunity for countries and partners to discuss concrete steps towards achieving new goals, while sharing Japan’s relevant experiences, so that we can move forward together with this new agenda.

Japan’s global health priorities are to construct a global health architecture that can respond to public health crises and to build resilient and sustainable health systems. To realise these goals, Japan has endorsed two new global health strategies: the Basic Design for Peace and Health* and the Basic Guidelines for Strengthening Measures on Emerging Infectious Diseases.* I would like to underline the importance of these priorities and foster succint and relevant discussions during our G7 presidency in 2016.

First, in preparation for the G7 Summit, we will discuss how to address the challenges of public health emergencies. The existing global health architecture must be restructured to ensure prompt and effective responses to public health emergencies. Public and private partners, government, and civil society—at global, regional, country, and community levels—should reach agreement on their respective roles in advance of emergencies. Japan expects WHO to have the lead role in prompt detection and containment, especially in the early stages of a public health emergency, while acknowledging WHO’s need for further reform and capacity strengthening. Japan is ready to support this reform process, including the launch of the Contingency Fund for Emergencies.* Japan also fully supports the efforts of the World Bank’s Pandemic Emergency Facility, and calls for coordination between WHO and the World Bank to ensure the two mechanisms have supplementary and complementary roles so that they increase efficiency and effectiveness in crises responses.

Second, we will discuss strategies to build resilient, sustainable national health systems. In the past 70 years, Japan’s life expectancy has increased by more than 30 years and, since the early 1980s, health outcomes have consistently been top ranked.* These achievements are the result of the establishment of universal health insurance in 1961, favourable proximal determinants of health, such as healthy diet and access to clean water.

• The existing global health architecture must be restructured. WHO needs further reform and capacity strengthening.

• We have led global health innovation through the new Japan Agency for Medical Research and Development (AMED) and the Global Health Innovative Technology (GHIT) Fund.

• Japan has supported global resource mobilisation and private sector investment around poverty-related infectious disease.

• The G7 should discuss strategies to build resilient, sustainable national health systems.
Overview of Health Care 2035

GOAL
Health care in 2035 should strive to deliver unmatched health outcomes through care that is secure and responsive to each member of society. This system should not only fit the public’s image of what a health system should be, but be both sustainable and actively contribute to prosperity in Japan and around the world.

PRINCIPLES
- Fairness
- Solidarity built on autonomy
- Shared prosperity for Japan and the world

VISION
Key concepts for health care in 2035

1 LEAN HEALTHCARE
Implement value-based health care

2 LIFE DESIGN
Empower society and support personal choice

3 GLOBAL HEALTH LEADER
Lead and contribute to global health

INFRASTRUCTURE
Foundations of this vision
- Innovation
- Information
- Sustainable financing
- Health care professionals
- A world-class Ministry of Health, Labour and Welfare
Implications from *Health Care 2035*

1. Value-based health care: cost-effective integrated package of services

2. From cure to care: not only drugs for cure, but diagnostics, preventive services, and other health-promoting goods and services

3. Global perspective: issue-based strategic partnerships

System innovation

More than technological development, brings change to society through added value and new ideas
Next Steps (1)

- A headquarters was established within the Ministry of Health, Labour and Welfare to carry out the proposals, and, after careful consideration, steadily implement practical, short-term policies.

- All 121 actions have been classified into three categories with a clear timeline:
  a. Do immediately
  b. Discuss and plan now
  c. Propose alternatives

- Five priority areas were identified by Health Minister Yasuhisa Shiozaki: global health, ICT, health workforce, value-based payment, prevention
Next Steps (2)

“In making suggestions looking two decades ahead, some proposals and examples of policy will arouse debate. We welcome feedback and criticism on this report, and hope that it will be the start of national debate. We are sure that debate in itself will be the first step toward a brighter future.”
