

Corona impact on work organisations in Germany

DIJ Web-Forum: From New Normal to New Work?

Severe impact of Corona on the German labour market

IAB research studies (2020)

- Expected decrease in **GDP of 5.2%** in 2020 (compared to 2019) according to a forecast of the Institute for Employment Research (IAB, 2020).
- Labour demand: **Number of job vacancies declined by 31 percent** (426.000 less than in the 3rd quarter of 2019) (IAB Job Vacancy Survey, 2020).
- Labour supply: **Labour force declined by 523.000** from February to June (decrease of marginal employment, less immigration and early retirement of older workers) (Fuchs et al., 2020).
- Despite of the massive impact on economy affecting a broader range of industries than during the financial crisis 2008/2009 many companies keep their employees. A relatively moderate increase of the **unemployment rate** from 5.0% in 2019 to **5.9% in 2020** is expected (IAB, 2020).
- Development of employment differs across sectors: sharp decline in wholesale and retail trade and restaurants and accommodations while employment increase is expected in the construction sector and communication and information services (IAB,2020).

Das Angebot an Arbeitskräften sinkt seit Beginn der Corona-Krise stark. in: IAB-Forum (in German): <https://www.iab-forum.de/rueckzug-vom-arbeitsmarkt-das-angebot-an-arbeitskraeften-sinkt-seit-beginn-der-corona-krise-stark/> ; IAB Job Vacancy Survey, 2020 (in German): [Aktuelle Ergebnisse | IAB](#)

Two main measures to stabilize employment

- **short-time work:** In June 2020 around **16% of all employees** (over 5.3 million employees subject to social insurance contributions) are on short-time work with on average around 58% fewer working hours (Kruppe/Osiander, 2020).

- **remote work:** Between the beginning of July and mid-August 2020, a total of around **36% of employees** older than 16 years of age permanently or a few days per week worked from home (Bonin et al., 2020).

Employers' objectives to implement/extend remote work

- Support the overall strategy of social-distancing to prevent the spread of Covid-19
- Keep work processes running and thereby strengthen organizational resilience to avoid bankruptcy
- Maintain the employees' work ability to avoid (more) short-time work and layoffs
- Offer flexibility to help parents ensuring child care while schools and day care centres were closed during the lockdown

Remote working **before** and during the Corona Pandemic

- German economy is rooted in manufacturing and there is a high share of workers who cannot relocate their work. Furthermore, there is also a high “potential” to extend remote work
 - Remote workers are especially white-collar workers, high-qualified employees and managers
 - Working at home is characterized by a few hours a week (usually once a week, or a few hours in the evening)
 - Necessity to differentiate between remote working and telework which is legally defined (according to workplace regulations employers are obliged to assess risks for employee's well-being)
- Wider use of remote work (increase from one fifth to one third of the employees working at least occasionally from home in Germany)
 - Higher number of working hours at home
 - Remote work rather than contracted telework

(New) experiences with remote work

Employers' perspective

- Only 16 percent of employers did experience problems in implementing remote work (ifo, 2020).
- Problems are mainly due to inadequate technical infrastructure and aggravated communication
- Mixed results concerning the impact on work productivity: for 35 % of the companies remote work turned out to be less productive, 27 % reported a higher productivity, and the majority of the firms (59 %) are convinced that cooperation is less efficient than face-to-face interaction
- New communication routines and new social interaction formats are implemented like a virtual coffee break
- Employers had to consider resentments within working groups who cannot work at home

(New) experiences with remote work

Employees' perspective

- Overall high satisfaction with remote work: In March 2020 almost a third of employees are more satisfied with their home office arrangement than before the pandemic, while only 6% assess it more critically (iwd, 2020)
- Employees appreciate the saved commuting time. Nearly one third needs one hour and more per day (BAuA, 2020).

Potential drawbacks (Grunau et al., 2019):

- Difficulties to send performance signals and fears that less visibility could be detrimental for promotion prospects
- More family-work conflicts due to a lack of separation -> arrangements of accessibility needed

What will remain?

- 42% of the employers consider expanding their offers of remote working after the corona pandemic. 44% are still undecided (Fraunhofer, 2020).
- A likely scenario would be a hybrid working routine with alternating work from home and in the office.
- A law is expected: the Federal Ministry of Labour and Social Affairs has already submitted a draft law implementing the right of 24 days of remote work which was modified due to opposition within the government.
