Goals

- Central question of our **Design Fiction** workshop:
“How can autonomy and safety for human-robot-
interaction (HRI) be designed in the future care sector
regarding aging societies?”
- Central question of the **Zine Making** workshop:
“How to adequately address and treat vulnerabilization
processes in human robot interaction?”

NOTE

- Design itself in this specific context means for us an innovative solution for helping people by handling vulnerabilization adequately through appropriate technological development.

Research scope

New goal formed within the process

- Methodological reflection of online Design Fiction and online Zine Making

Questions:

- How can creative methods be used to visualize future technology design?
- How do socio-cultural aspects structure the design process?
- What hurdles and limitations did occur in using Design Fiction and Zine Making online?

Research scope
